Powder Technology 90 (1997) 285–288

POWDER TECHNOLOGY

Subject Index of Volume 90

Acoustic field
effect of an acoustic field on bubbling in a gas fluidized bed, 53
Aerosolization
preparation of nickel ferrite using the aerosolization technique, 161, 165
Agglomerates
compaction behaviour of agglomerated alumina powders, 195
Atomization
preparation of nickel ferrite using the aerosolization technique, 161, 165
Axi-symmetrical flow
an engineering model for dilute riser flow, 115

Back-propagation learning
application of a neural network to granulation scale-up, 153
Bed contraction and expansion
high temperature and high pressure three-phase fluidization—bed expansion phenomena, 103
Biaxial compression
the development of circulation cell structures in granular materials undergoing compression, 187
Binders
compaction behaviour of agglomerated alumina powders, 195
Bubbles
high temperature and high pressure three-phase fluidization—bed expansion phenomena, 103
the response time of pressure probes, 149
Bubbling beds
particle-to-gas heat transfer in particle beds at Peclet numbers $Pe \leq 10$, 47
a fractal approach for interpretation of local instantaneous temperature signals around a horizontal heat transfer tube in a bubbling fluidized bed, 235
Bubbling frequency
effect of an acoustic field on bubbling in a gas fluidized bed, 53
Burkeite
the influence of spray drying conditions on the particle properties of recrystallized burkeite ($Na_2CO_3 \cdot (Na_2SO_4)_2$), 125

Capture cross section
experimental results on an axial high gradient magnetic filter cell with bounded flow field, 131
Chutes
classification mechanism of the chute, a liquid-phase remover of fines in the micrometre range from a batch of porous particles, 251
Circulating beds
flow characteristics of the liquid–solid circulating fluidized bed, 95
dimension measurements of hydrodynamic attractors in circulating fluidized beds, 179
fractal characteristics of gas–solids flow in a circulating fluidized bed, 205
radiative heat transfer in circulating fluidized bed furnaces, 213
Circulation cell structures
the development of circulation cell structures in granular materials undergoing compression, 187
Coal logs
effect of exit shape of compaction mold on coal log quality, 267
Compaction
analytical interpretation of powder compaction during the loading phase, 173
compaction behaviour of agglomerated alumina powders, 195
Compaction moulds/dies
effect of exit shape of compaction mold on coal log quality, 267
Cyclones
a simplified model to predict the total efficiency of gravity settlers and cyclones, 273

Degree of difficulty
degree of difficulty of separation for fluid flow-facilitated particle separation systems, 169
Deterministic chaos analysis
dimension measurements of hydrodynamic attractors in circulating fluidized beds, 179
Dilute systems
an engineering model for dilute riser flow, 115
Dust collectors
a simplified model to predict the total efficiency of gravity settlers and cyclones, 273

Efficiency
a simplified model to predict the total efficiency of gravity settlers and cyclones, 273
Entrainment
effect of secondary gas injection on the particle entrainment rate in a gas fluidized bed, 227
Equivalent pipe diameter
particle-to-gas heat transfer in particle beds at Peclet numbers $Pe \leq 10$, 47

Fines
classification mechanism of the chute, a liquid-phase remover of fines in the micrometre range from a batch of porous particles, 251
Flow
high temperature and high pressure three-phase fluidization—bed expansion phenomena, 103
fractal characteristics of gas–solids flow in a circulating fluidized bed, 205
particle fractal and load effects on internal friction in powders, 259
Flow characteristics
flow characteristics of the liquid–solid circulating fluidized bed, 95
Flow pattern
flow pattern in a fluidized bed with a non-fluidized zone, 219
Fluidization
effect of an acoustic field on bubbling in a gas fluidized bed, 53
flow pattern in a fluidized bed with a non-fluidized zone, 219

Elsevier Science S.A.

Fluidization characteristics
hydrodynamic characteristics of a magnetically stabilized air fluidized bed of an admixture of magnetic and non-magnetic particles, 39
Fluidized bed combustion
flow pattern in a fluidized bed with a non-fluidized zone, 219
Fluidized beds
on the validity of the addition of independent contributions for evaluating heat transfer rates in gas fluidized beds, 1
normal solid stress in fluidized beds, 13
effect of particle density on heat and mass transfer during fluidized bed sublimation, 79
particle-to-gas heat transfer in particle beds at Peclet numbers $Pe \leqslant 10$, 47
flow characteristics of the liquid–solid circulating fluidized beds, 95
high temperature and high pressure three-phase fluidization—bed expansion phenomena, 103
the response time of pressure probes, 149
application of a neural network to granulation scale-up, 153
dimension measurements of hydrodynamic attractors in circulating fluidized beds, 179
fractal characteristics of gas–solids flow in a circulating fluidized bed, 205
effect of secondary gas injection on the particle entrainment rate in a gas fluidized bed, 227
a fractal approach for interpretation of local instantaneous temperature signals around a horizontal heat transfer tube in a bubbling fluidized bed, 235
Fly ash particles
effect of an acoustic field on bubbling in a gas fluidized bed, 53
Food powders
measurement of powder flow constitutive model parameters using a cubical triaxial tester, 59
Forward light scattering
use of neural networks in the analysis of particle size distributions by laser diffraction, 89
Fractals
fractal characteristics of gas–solids flow in a circulating fluidized bed, 205
a fractal approach for interpretation of local instantaneous temperature signals around a horizontal heat transfer tube in a bubbling fluidized bed, 235
particle fractal and load effects on internal friction in powders, 259
Fractional efficiency
generalized fractional efficiency, 25
Fractionators
classification mechanism of the chute, a liquid-phase remover of fines in the micrometre range from a batch of porous particles, 251

Gas discharge mode
gas discharge modes at a single horizontal nozzle in a two-dimensional fluidized bed, 71
Gas–solid flows
normal solid stress in fluidized beds, 13
Gas velocity
hydrodynamic characteristics of a magnetically stabilized air fluidized bed of an admixture of magnetic and non-magnetic particles, 39
effect of an acoustic field on bubbling in a gas fluidized bed, 53
Glow discharge
plasma-polymerized tetrafluoroethylene coatings on silica particles by atmospheric-pressure glow discharge, 245
Granular material
the development of circulation cell structures in granular materials undergoing compression, 187
Granulation
application of a neural network to granulation scale-up, 153
Gravity settlers
a simplified model to predict the total efficiency of gravity settlers and cyclones, 273

Heat transfer
on the validity of the addition of independent contributions for evaluating heat transfer rates in gas fluidized beds, 1
particle-to-gas heat transfer in particle beds at Peclet numbers $Pe \leq 10$, 47
effect of particle density on heat and mass transfer during fluidized bed sublimation, 79
radiative heat transfer in circulating fluidized bed furnaces, 213
Heat transfer tubes
a fractal approach for interpretation of local instantaneous temperature signals around a horizontal heat transfer tube in a bubbling fluidized bed, 235
Horizontal nozzle
gas discharge modes at a single horizontal nozzle in a two-dimensional fluidized bed, 71
Hydrodynamic attractors
dimension measurements of hydrodynamic attractors in circulating fluidized beds, 179
Hydrodynamics
fractal characteristics of gas–solids flow in a circulating fluidized bed, 205

Image analysis
particle size analysis of bulk powders using mathematical morphology, 141
particle fractal and load effects on internal friction in powders, 259
Immersed surfaces
on the validity of the addition of independent contributions for evaluating heat transfer rates in gas fluidized beds, 1
Impact milling
particle shape of copper milled by swing-hammer-type impact mill, 135
Isotelic curves
experimental results on an axial high gradient magnetic filter cell with bounded flow field, 131

Jet penetration length
gas discharge modes at a single horizontal nozzle in a two-dimensional fluidized bed, 71

Laser diffraction
use of neural networks in the analysis of particle size distributions by laser diffraction, 89
Liquid–solid system
flow characteristics of the liquid–solid circulating fluidized bed, 95
Load control
flow pattern in a fluidized bed with a non-fluidized zone, 219

Magnetic field intensity
hydrodynamic characteristics of a magnetically stabilized air fluidized bed of an admixture of magnetic and non-magnetic particles, 39
Magnetic filtration
experimental results on an axial high gradient magnetic filter cell with bounded flow field, 131
Magnetic particles
experimental results on an axial high gradient magnetic filter cell with bounded flow field, 131
Magnetic separation
experimental results on an axial high gradient magnetic filter cell with bounded flow field, 131
Mass transfer
effect of particle density on heat and mass transfer during fluidized bed sublimation, 79

Mixtures
particle size analysis of bulk powders using mathematical morphology, 141
Modelling
on the validity of the addition of independent contributions for evaluating heat transfer rates in gas fluidized beds, 1
an engineering model for dilute riser flow, 115
Molecular sieves
effect of particle density on heat and mass transfer during fluidized bed sublimation, 79
Morphology
particle size analysis of bulk powders using mathematical morphology, 141
particle fractal and load effects on internal friction in powders, 259

Neural networks
use of neural networks in the analysis of particle size distributions by laser diffraction, 89
application of a neural network to granulation scale-up, 153
Nickel ferrite
preparation of nickel ferrite using the aerosolization technique, 161, 165
Non-fluidized zone
flow pattern in a fluidized bed with a non-fluidized zone, 219

Operating conditions
an engineering model for dilute riser flow, 115
Operation regimes
flow characteristics of the liquid–solid circulating fluidized bed, 95

Packing
particle fractal and load effects on internal friction in powders, 259
Particle capture
generalized fractional efficiency, 25
Particle motion
the development of circulation cell structures in granular materials undergoing compression, 187
Particle pressure
normal solid stress in fluidized beds, 13
Particle separation
degree of difficulty of separation for fluid flow-facilitated particle separation systems, 169
Particle shape
particle shape of copper milled by swing-hammer-type impact mill, 135
the development of circulation cell structures in granular materials undergoing compression, 187
Particle size
particle-to-gas heat transfer in particle beds at Peclet numbers $Pe \leq 10$, 47
the influence of spray drying conditions on the particle properties of recrystallized burkeite ($Na_2CO_3 \cdot (Na_2SO_4)_2$), 125
particle size analysis of bulk powders using mathematical morphology, 141
Particle size distribution
use of neural networks in the analysis of particle size distributions by laser diffraction, 89
classification mechanism of the chute, a liquid-phase remover of fines in the micrometre range from a batch of porous particles, 251
a simplified model to predict the total efficiency of gravity settlers and cyclones, 273
Peclet number
particle-to-gas heat transfer in particle beds at Peclet numbers $Pe \leq 10$, 47
Pharmaceutical materials
analytical interpretation of powder compaction during the loading phase, 173
Plasma polymerization
plasma-polymerized tetrafluoroethylene coatings on silica particles by atmospheric-pressure glow discharge, 245
Porosity
the influence of spray drying conditions on the particle properties of recrystallized burkeite ($Na_2CO_3 \cdot (Na_2SO_4)_2$), 125
Pressure drop distribution
flow pattern in a fluidized bed with a non-fluidized zone, 219
Printed wiring board scrap
particle shape of copper milled by swing-hammer-type impact mill, 135
Probes
the response time of pressure probes, 149

Radiative heat transfer
radiative heat transfer in circulating fluidized bed furnaces, 213
Recirculating flows
simulation of particle–fluid turbulence interaction in sudden-expansion flows, 29
Resource recycling
particle shape of copper milled by swing-hammer-type impact mill, 135

Scale-up
application of a neural network to granulation scale-up, 153
Secondary gas injection
effect of secondary gas injection on the particle entrainment rate in a gas fluidized bed, 227
Sedimentation
classification mechanism of the chute, a liquid-phase remover of fines in the micrometre range from a batch of porous particles, 251
Separation processes
degree of difficulty of separation for fluid flow-facilitated particle separation systems, 169
Shape sorting technique
particle shape of copper milled by swing-hammer-type impact mill, 135
Shear
particle fractal and load effects on internal friction in powders, 259
Signal analysis
a fractal approach for interpretation of local instantaneous temperature signals around a horizontal heat transfer tube in a bubbling fluidized bed, 235
Silica
plasma-polymerized tetrafluoroethylene coatings on silica particles by atmospheric-pressure glow discharge, 245
Similarity
generalized fractional efficiency, 25
Solid viscosity
normal solid stress in fluidized beds, 13
Sound wave frequency
effect of an acoustic field on bubbling in a gas fluidized bed, 53
Sound wave intensity
effect of an acoustic field on bubbling in a gas fluidized bed, 53
Spray drying
the influence of spray drying conditions on the particle properties of recrystallized burkeite ($Na_2CO_3 \cdot (Na_2SO_4)_2$), 125
Steady state hydrodynamics
an engineering model for dilute riser flow, 115
Stress–strain behaviour
measurement of powder flow constitutive model parameters using a cubical triaxial tester, 59
Sublimation
effect of particle density on heat and mass transfer during fluidized bed sublimation, 79

Sudden-expansion chamber
simulation of particle–fluid turbulence interaction in sudden-expansion flows, 29

Tetrafluoroethylene coatings
plasma-polymerized tetrafluoroethylene coatings on silica particles by atmospheric-pressure glow discharge, 245
Theoretical models
particle-to-gas heat transfer in particle beds at Peclet numbers $Pe \leq 10$, 47
Three-dimensional load response
measurement of powder flow constitutive model parameters using a cubical triaxial tester, 59
Three-phase fluidization
high temperature and high pressure three-phase fluidization—bed expansion phenomena, 103
Triaxial testers
measurement of powder flow constitutive model parameters using a cubical triaxial tester, 59
Turbulence
simulation of particle–fluid turbulence interaction in sudden-expansion flows, 29
Two-dimensional fluidized bed
gas discharge modes at a single horizontal nozzle in a two-dimensional fluidized bed, 71
Two-phase flows
simulation of particle–fluid turbulence interaction in sudden-expansion flows, 29
